

AMENDMENT TO THE SPECIFICATION

Please replace the paragraph beginning on page 3, line 11, with the following amended paragraph:

A former document is also known, ~~GB-2 477 164~~ US 2,477,164, which presents a completely different approach to carrying a baby, with a seat held by a single shoulder strap. It is obvious that this technique is neither comfortable nor ergonomic for the baby or the wearer, and consequently has not been developed. Currently, baby carriers are designed to carry babies in a seated position, against the body of an adult (in front or on the back of the wearer).
